Aim: This interactive course will update participants in the contemporary direct and indirect dental materials available in restorative, surgical and regenerative dentistry.

Objectives: by the end of the course, participants will;

1. Have an understanding of the classes of materials available to the practitioner today;
2. Be aware of the latest evidence for new dental materials and their practical uses in patient treatment;
3. Have an in-depth understanding of contemporary materials, their limitations and benefits.

Learning outcomes:

By the end of this course participants should;-

1. Have an in depth understanding of contemporary materials, based on evidence.
2. Have an understanding of the classes of materials available to the dental practitioner today and their practical uses in patient treatment.
