

Managing Caries in the Primary Dentition

Date and venue:

Thursday 17th November 2016

Muddifords Court Country House

North and East Devon

Course Organiser:

Samantha Braddock

Course Lecturers:

Rebecca John BDS, MDS, MPaed, FDSRCS (Paeds), PGCert
Consultant Senior Lecturer, Bristol Dental Hospital

Programme

09.15	Registration
09.30	Introduction
09.40	Why bother? - They are baby teeth after all!
10.40	Coffee
11.00	Determining the pulp status in a primary tooth
12.00	Pulp therapy in the primary dentition
13.00	Lunch
14.00	Demonstration-preformed metal crowns for restoring primary teeth Workshop- cases to help diagnose pulp status
15.00	Tea
15.15	Demonstration-preformed metal crowns for restoring primary teeth Workshop- cases to help diagnose pulp status
16.30	Close

Aim:

To improve the participants knowledge of, and ability to, manage the carious primary dentition including the use of the Hall Technique.

Objectives:

1. To review the preventive strategy for the high risk child based on current evidence
2. To equip the participant to select the appropriate restorative material to restore the primary dentition
3. To analyse the evidence for using the Hall Technique
4. To demonstrate placement of a preformed metal crown using the Hall technique

Learning outcomes:

By the end of the session all the participants should; –

1. Feel more confident about managing the carious primary dentition.
2. Be able to select the appropriate restorative material and justify the use of preformed metal crowns in the primary dentition using the Hall technique
