**Course Aims.**

The course aims to give a greater awareness of the clinical techniques and materials currently available to restore damaged or missing teeth and to give a better understanding of the various advantages and disadvantages associated with the treatment options available.

It also hopes to give a greater appreciation of the clinical knowledge and skills required to successfully plan for a badly damaged dentition.

**Course Objectives.**

By the end of the course, participants will;

- 1- Have a greater awareness of the clinical techniques and materials currently available to restore damaged or missing teeth.
- 2- Gain a better understanding of the various advantages and disadvantages associated with the treatment options available.
- 3- Have a greater appreciation of the clinical knowledge and skills required to successfully treatment plan and restore the damaged dentition.

**Lecturer**

Matthew graduated from the University of Bristol where he also undertook his higher specialist training in Restorative Dentistry. He was appointed as a Consultant in 2009 and joined the Eastman Dental Hospital in 2013.
