Aim:

To provide an update on the current guidance for training and provision of conscious sedation in dentistry.

Objectives:

By the end of the course the participants will: -

- have an understanding of the latest guidance on the provision of conscious sedation in dentistry, including current best practice
- have an understanding of the transitional arrangements for those currently providing conscious sedation for dentistry
- have an understanding of the educational requirements for those member of the dental team wishing to embark on training for the provision of conscious sedation in dentistry
- have an understanding of the recommendations regarding the concentration of midazolam to be used in conscious sedation and the rationale for the recommendations
- have an understanding of the provision of sedation by DCPs

Learning outcomes:

By the end of this course delegates will be able to;

1. demonstrate knowledge of the implications of the Standards for Conscious Sedation in the Provision of Dental Care for all members of the dental team involved in providing sedation.
2. explain the transitional arrangements for those currently providing conscious sedation in dentistry.
3. summarise the educational requirements for those members of the dental team wishing to embark on training for the provision of conscious sedation in dentistry.
4. demonstrate knowledge of the recommendations regarding the concentration of midazolam to be used in conscious sedation.
