

Certificate in Paediatric Dental Nursing

Health Education England, Yorkshire & The Humber are delighted to be working with a local educational provider to be able to bring you a new Certificate in Paediatric Dental Nursing.

This blended, online course aims to provide dental nurses with knowledge and understanding to support the NHS Tier 2 programme in primary care. It has been developed by the School of Dental Nursing and Technology at Leeds Dental Institute and Health Education England, Yorkshire & Humber DCP Team.

Course content will address the specific role of the dental nurse to support patient care and link to other services such as hospital, community, social services, health visitors, midwifery, and school teams.

Underpinning knowledge about measuring and recording plaque is covered, together with application of fluoride varnish. These topic areas require a workplace mentor or witness to observe, feedback and sign off a clinical reflective workbook.

Applications for the Certificate are welcomed from dental nurses who are GDC registered and indemnified, able to attend all sessions, study independently and allocate a workplace clinical supervisor /mentor.

There are 18 hours of verifiable CPD attached to the course.

Further details about specific learning outcomes can be found by following the link to Maxcourse: <https://www.maxcourse.co.uk/YHPD/guestHome.asp>

Our DCP Tutor is happy to answer specific questions and provide answers to individual questions.
