

Mastering Consent and Shared Decision Making

OVERVIEW

Reducing dentolegal risk by increasing the patient's involvement in decisions regarding their care

All our presenters are dentists with special interests and trainin in communication skills

FORMAT

A mix of short lectures, facilitated discussions and opportunities for critical reflection. Peer learning occurs through reflective exercises enabling sharing of experience and knowledge.

Brief didactic presentations will provide the focus for small group sessions in which participants are able to share experience and pool knowledge, enabling critical comparison of their skills with their peers to enhance learning.

LEARNING OUTCOMES

- Achieve a better understanding of how better patient satisfaction and involvement decreases dentolegal risk
 - Enhance skills to promote a good professional relationship with the patient
 - Identify and manage patient expectations
- Understand the ethical and legal imperatives behind encouraging patient ownership of decisions about their dental care
- Negotiate better with patients when they have differing treatment preferences from the dentist

" Very relevant and highlighted area in which I need to improve"

Target Audience General Dental Practitioners (GDPs), Dental Specialists

Duration 3 Hours

OVERVIEW

This CPD verifiable workshop provides dental healthcare professionals with knowledge, insights, essential strategies and practical tools to maximise their delivery of ethically and legally sound decision-making. The workshop examines:

- where risk in clinical decision making often lies
- the differing styles of decision making, the 'patient's choice' and the 'dentists choice'
- law and ethics of sharec decision making
- decision making in the emergency situation.

A model of shared decision making, the 6D Framework[®], is presented with an opportunity for participants to practise and test the model.

"Well-structured event – would happily come back again"

RESEARCH

Patients who participate in decisions and who are given explanations of their health problems are more likely to be satisfied with their care Edwards & Elwyn 2006

A systematic review of 108 studies found that shared decision making was associated with improved patient satisfaction Scheibler et al 2003

70% of litigation is related to poor communication where patients feel that they have: been deserted, been devalued, lacked information, or been misunderstood *Beckman et al* 1994

27% of surgical claims are related to poor explanation of the procedure to the patient Krause et al 2001
