The Use of Cross Sectional Imaging in Dentoalveolar & Maxillofacial Dentistry

An event for Dentists

Date: Wednesday 5th November 2014

Venue: Windsor Dental, Radnor Street, Hulme, Manchester, M15 5RD

Time: 9.30am to 12.30 (Registration & Refreshments from 9.15am)

Cost: £15.00 NHS

£30.00 Non NHS

Speaker: Anita Sengupta

Aim

To increase understanding of conventional CT, cone beam CT, magnetic resonance imaging and ultrasound, and their role in maxillofacial dentistry.

To impart confidence in the principles of cross sectional imaging, selection criteria for referral and interpretation of the reports.

Objectives

- Provide a basic explanation of the physics and techniques of CT, MRI and Ultrasound.
- Demonstrate the differences in imaging appearances of dentoalveolar structures between the modalities.
- Discuss the use of cross sectional modalities as an adjunct / alternative to conventional planar radiographs in oro-facial disease.

Outcomes

- Have a basic grasp of the physics, advantages and disadvantages of CT, CBCT, MRI and Ultrasound.
- Be able to recognize these techniques from images.
- Appreciate when to request these investigations in dento-alveolar diagnosis.

This course qualifies for 3 hours verifiable CPD CLOSING DATE 22nd October 2014
