

Management of the Dental Patient in Pain & Associated Medical Considerations

Improving health and care through education

The speaker on this course is an experienced oral surgeon but has worked for some years as Clinical Lead for Oral Diagnosis at Liverpool Dental Hospital & so is particularly well suited to lecture on the subject of managing dental patients in pain. In addition, patients with complex medical histories are presenting increasing difficulties - so he is keen to explore a number of these such as anticoagulant therapy & immunosuppression to broaden our knowledge. Finally, he is going to give some help & advice on the subject of local anaesthesia difficulties - as treating patients in pain can provide us with even greater challenges than usual.

Course Aims

- To review the diagnosis & effective management of dental pain & the changing medical aspects to be considered in managing patients

Course Objectives

- To improve understanding of the histological aspects of dental pulp pathology & its responses to interventions
- To review new anticoagulants & immunosuppressants to enable practitioners to make accurate assessments of the impact of these on patient treatments
- To provide clinical guidance to identify issues & improve the management of complex Local Analgesia
