

Health Education North West
Department of Postgraduate Dentistry

The ever evolving world of General Dental Practice has identified the need to forward plan for the future. Project management is a growing field used increasingly by businesses of all sizes. Understanding effective project management techniques can help small businesses carry out projects on time, on budget and with minimal disruption to the rest of the business. This course is aimed at principle practitioners or senior practice managers who are involved in developing the business.

PRINCE2 is an acronym for PProjects IN Controlled Environments. In essence PRINCE2 itself is a processed based method for effective project management. The Methodology details processes of management, organisation and control of a project.

The principles and key features of the PRINCE2 process are:

- Targeted on business justification
- Defines an structure for Project Managers

A planning pathway

- The significance of breaking a project down into manageable stages
- Applying appropriate levels of flexibility to a project

Learning Outcomes:

- A consistent and dependable approach to development
- An organised and controlled start, middle and end to a project.
- Ability to efficiently review a project based on a solid plan
