

An Event for Dentists

A practical 'Hands On' Endodontic course for General Dental Practitioners

Aim

To introduce contemporary endodontic techniques (including access, instrumentation and irrigation) and understand biology of endodontic disease and the importance of basic biological principles in its treatment.

Objectives

To become:

- Fully aware of the technique of balanced force filing, its' use in developing a "glide path" in curved canal preparation, and its' importance with rotary instrumentation.
- Familiar with current root canal irrigants and irrigation techniques.
- Familiar with techniques available for accurate and predictable determination of working lengths
- Able to try out a few contemporary endodontic file systems (Hands-on)
- Able to evaluate cases and decide on appropriate treatment regimes, and when to refer

Learning Outcomes

- Importance of & the ability to create a glide path
- Contemporary Irrigants and irrigation
- The tools for Working length determination
- Contemporary Niti file systems

**This course qualifies for 5 5 hours verifiable
CPD**
