

SW13-10-18-1

How do you successfully manage the periodontally susceptible patient?

Education Centre, Level 5
Salisbury District Hospital

18th October 2013

Course Organiser:
Dr Mike Attenborough

Course Lecturer:
Dr Gaston King

Programme

09.15-09.30	Registration
09.30-11.00	Session 1: Evaluation of current myths and preconceptions that often lead us astray. A practical overview of diagnostics & treatment planning to improve reliability, confidence, accuracy & success..
11.00-11.15	Coffee
11.15-12.45	Session 2: Know the types and aims of different periodontal surgical procedures
12.45-13.30	Lunch
13.30-14.45	Session 3: What does it mean to assess your patient's periodontal risk and why is it essential? What is supportive periodontal therapy?
14.45-15.00	Tea
15.00-16.30	Session 4: Periodontal - implant interface How do you manage patients with periodontal disease before providing them with implants?

Aims

Improve treatment success and what to do when treatment is not working

Assess cases and determine appropriate management

Know how to manage furcations, recession defects and remaining deep pockets

Know when to place patients on a maintenance programme and when not to

Increase your confidence to place implants in patients who are periodontally susceptible. So how do you reduce the risks of periimplantitis?

Obejectives

Improve your diagnostic skills (prognosis and risk assessment)

Know guidelines for successful treatment outcome

Know how to reduce risks of recurrence and periimplantitis in the periodontally susceptible patient

Know when to place patients on a maintenance programme and when not
