Course Aims and objectives

Caries diagnosis and treatment planning

To understand best practice in relation to the diagnosis and treatment decisions for caries

To understand the appropriate use of caries diagnostic aids, alternative methods for cavity preparation and caries removal

Prevention in practice for high risk patients

To understand the importance and relevance of fluoride and oral hygiene and diet in caries prevention and how to optimise it

Understand why patients with dry mouths are more vulnerable to dental caries, periodontal disease and other dental problems and how to care for them

Realise the importance of general health guidelines in relation to dental dietary advice

Realise the importance of communication with the patient including verbal and written advice
