Suzanne Lello

Programme

17.50 - 18.00	Registration
18.00 – 20.00	Introduction Case Assessment Outline types of impaction Flap design Methods of tooth removal –hands on using models Suturing Discussion

Aims

To give an overview of the types of impaction of lower third molars and their suitability for removal in primary care. Surgical removal of an impacted tooth will be practised on models as well as suturing of the flap.

Objectives

- To be aware of the indications and contra-indications of removal of lower third molars.
- To appreciate the degree of difficulty of different types of impaction.
- To have practised flap design and bone removal for lower third molar removal.
