(risk factors in disease)

15.00 Tea

15.15 Prognosis Exercise – Results

16.30 Close

Aim: To appreciate the range of periodontal conditions that require treatment, and those that do not

Objectives: The course should enable participants to:

Diagnose periodontal diseases accurately and effectively

Use BPE as a fast and effective screening tool

Use periodontal probing more effectively

Assess patients' level of risk for periodontitis accurately

Outcome: Delegates should appreciate the factors influencing the assessment of prognosis for individual teeth
