Aim

To discuss the management techniques for carious primary molars and to provide an opportunity to practice common techniques on a phantom head.

Objectives:

By the end of this course delegates should have an understanding of:

1. The indications, contraindication and success rates of the techniques discussed.
2. The technique of rubber dam placement
3. The placement of pre-formed metal crowns (PMCs) via the Hall technique
4. Conventional PMC placement
5. Pulp therapy in primary molars
6. Had an opportunity to practice skills

Learning objectives

By the end of this course delegates will have improved knowledge and confidence to choose the most appropriate caries management approach for carious primary molars in order to deliver high quality care for their paediatric patients.
