15.15-15.30	Coffee
15.50-16.30	Session 4: Clinical Scenarios Final comments/Questions. Close

Dental Postgraduate Department

Aim:

To review and discuss current national guidelines and guidance on the management of the dental patient undergoing invasive and surgical treatment and how this may be affected by their medical issues.

Objectives:

By the end of the day delegates should feel more confident about:

1. Bisphosphonates, warfarin, antiplatelet agents and steroids
2. NICE Guidelines for prophylaxis against endocarditis – what we should tell patients
3. The dental patient with medical conditions in terms of ASA grading and its relevance
4. Management issues of the dental patient who has/is receiving chemotherapy and/or radiotherapy

Delegates should feel better able to make decisions about their patients overall health and whether or not they are safe to treat in the dental surgery.
