Dental Postgraduate Department

Educational Aim:

To enable dentists to restore broken down teeth using contemporary materials and techniques.

Objectives:

1. To train dentists in selecting the most appropriate material and tooth preparation
2. To teach accurate tooth preparation techniques including LA, post and core build-ups.
3. To train dentists in predictable impression and cementation techniques
4. How to use provisional restorations effectively

Learning Outcomes: At the end of the course delegates will be able to:

1. Select a suitable indirect material and tooth preparation design
2. Prepare teeth accurately and quickly often avoiding cores
3. Carry out predictable impressions
4. Place effective provisional restorations
5. Carry out cementation quickly and easily

GDC Development Outcomes: A,C,D
