15.00-16.15	Session 4: Case scenarios and discussion

**Aims**

To update the busy dental practitioner about the contemporary assessment and management of trauma dental injuries

## **Objectives**

On completion of the course, participants will;

1. Understand the pulpal response to traumatic dental injury;
2. Know the current international guidelines for the acute management of traumatic dental injuries;
3. Understand the range of contemporary materials in the management of traumatic dental injuries;
4. Know the long-term sequelae and outcomes for the traumatically injured tooth, and its rehabilitation.

## **Learning Outcomes**

Following the course, participants will feel more comfortable managing dental trauma in practice
