Aim

Provide a overview of oral cavity in terms of presentation of diseases both oral and systemic  
To suggest the oral examinations play a wider role in general health assessment

Objectives:

By the end of this session delegates should be able:

1. To review the normal oral gross and histological features of relevance to the functionality of the oral cavity
2. To review the common oral medicine conditions, their long term outcomes and management options
3. To link the complexity of the 21<sup>st</sup> century complex synthetic world and the response of the immune system within the oral cavity
4. To highlight systemic disease signs presenting in the oro/facial region allowing risk assessment of their significance

Learning objectives

By the end of this session delegates will be able;-

1. To be able to identify normal and abnormal oral cavity anatomy, signs and symptoms
2. To be able to ensure each dental patient is alerted to the risk factors for oral cancer and to be able to safely screen for early features
3. To work with other professionals within managed clinical networks to respond to wider oral health challenges
4. To be able to provide management advice on systemic diseases within a dental setting.
