| 15.15-16.30  | Management of the open apex theory and referrals,<br>To cover who to refer to and emergency pain management in relevant<br>sections |

## Dental Postgraduate Department

### Aim

The aim of this day is to describe the management of paediatric patients presenting in primary care dental practices for routine or emergency treatment.

### Objectives:

1. Be able to explain the procedure and describe the scientific basis, indications and contraindication for preformed metal crowns
2. Be able to identify, assess, manage and treatment plan the compromised first permanent molar in children (MIH conditions)
3. Recognise the recently updated trauma guideline including the practical technique for splint placement
4. Be able to explain the physiology of dental trauma and recognise how management of dental trauma in practice can have a long term effect on the outcome for traumatised teeth.
5. Describe the urgent management of the tooth with an open apex when there is pulpal involvement from caries or trauma and know when to refer.

### GDC development outcome:

#### C and D

The eGDC activity log suggests reflecting on the following during and after this course:

- What did you learn (or confirm) from the activity that was helpful or relevant to your daily work and patients?
- Did you identify any changes/updates needed in your daily work, and if so, what? How did you make these changes?
- If you didn't identify changes needed, what did the activity confirm for you, that you may already know or be doing?
- What was the benefit to your work and/or your patients in carrying out this activity?
