

- Funded by the HEE Yorkshire and Humber and facilitates procurement of 8 bodies (4 males and 4 females) per academic year.
- Aim is to provide cadaveric simulation courses to trainees from all surgical specialities in the region.
  - We try to do laparoscopic courses first followed by open surgical courses.
- We have limited surgical history for the cadavers, however, it is difficult to know full details and you may find anatomy challenging during the course due to incomplete history and procedures performed during a previous course.
